EDUCATION

Carleton University

Bachelor of Information Technology - Network Technology

Ottawa, ON

Expected Apr 2028

SKILLS

Languages: Go, Rust, Python, C/C++, SQL, JavaScript/TypeScript, Bash

Tools & Technologies: Docker, Kubernetes, AWS, Linux, eBPF, Prometheus, Grafana, Wireshark, React.js, Node.js

Networking & Security: TCP/IP, Cisco IOS, VLANs, OSPF, ACLs, Zero Trust, Microsegmentation, PCI-DSS

EXPERIENCE

AriesTECH

Network Technician

Ottawa, ON

Jan 2024 – Apr 2025

- Configured Cisco routers and switches for VLANs, trunking, inter-VLAN routing, ACLs, and static, RIP, and OSPF routing.
- Maintained 99.9% uptime through monitoring, Wireshark/Cisco IOS troubleshooting, firmware updates, ACL reviews, and backups.
- Wrote Python scripts for configuration and documentation tasks, cutting manual setup time by 30% and reducing deployment errors.

SELECTED PROJECTS

ZTAP ↗ | Go, eBPF (CO-RE), WFP, etcd, gRPC, Prometheus, AWS/Azure/GCP, Kubernetes

- Built a Go zero-trust engine using Linux eBPF, Windows WFP, and macOS pf, with etcd/gRPC for policy sync and failover.
- Integrated multi-cloud flow monitoring and SHA-256 hash-chained logs for enforcement and NIST SP 800-207 reporting.

NetScope ↗ | Rust, libpcap, BPF, Zero-Copy Parsing, WebAssembly

- Wrote a Rust protocol analyzer with libpcap and zero-copy parsing to capture Ethernet, IP, TCP, and UDP traffic at gigabit speeds.
- Implemented TCP state tracking, kernel BPF filters, and a WebAssembly dashboard for live traffic views and anomaly detection.

personal-ai-cli ↗ | Python, Local LLM (Ollama), RAG, CLI

- Created an offline document chatbot with LangChain, Ollama, ChromaDB, and local HuggingFace embeddings, keeping files on-device.
- Implemented incremental SHA-256 indexing and a Rich CLI with streamed responses, conversation memory, and source citations.

cloud-netmapper ↗ | Go, AWS SDK, Network Visualization, Security Analysis, CLI

- Mapped EC2, RDS, Lambda, and EKS networks with a Go CLI built on AWS SDK v2, exporting diagrams and architecture reports.
- Flagged open security groups and missing flow logs, using state diffs to track infrastructure drift over time.
